

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 2 **Generated:**
2025-10-30T08:35:00.535Z

Executive Summary

A manual analysis of 242 security alerts reveals no active external threats or infrastructure alerts. All detected activity is internal, with 50 outbound alerts indicating potential data exfiltration or C2 communication from internal systems. No inbound, lateral, or external threats were identified. The majority of alerts (98 Low, 144 Medium) are related to failed authentication attempts and session management on the Wazuh server, suggesting possible internal reconnaissance or misconfigured services. No geolocation data is available for internal IPs. No evidence of active compromise or malicious behavior from external sources. Immediate focus should be on investigating outbound network activity from internal hosts.

Key Findings

- 50 outbound alerts detected from internal systems, indicating potential data exfiltration or C2 communication.
- No external threats, inbound attacks, or lateral movement observed.
- All alerts are internal, with no infrastructure alerts or external IPs involved.
- Authentication-related events (failed logins, session opens/closes) are concentrated on the Wazuh server.
- No geolocation data available for internal IPs; no country attribution required.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
10.0.2.15	Internal	-	Inbound	Suspicious outbound traffic	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1001** - Data Obfuscation (Command And Control)

Immediate Actions Required

1. Investigate outbound traffic from 10.0.2.15 to identify destination IPs and protocols.
2. Review logs for any unusual data transfers or connections to known malicious domains.
3. Verify if 10.0.2.15 is a legitimate system with authorized outbound access.
4. Check for unauthorized user accounts or credential misuse on the Wazuh server.
5. Implement network monitoring rules to flag repeated outbound connections from internal hosts.
