

# Security Operations Center - Threat Analysis Report

---

**Threat Level:** MEDIUM | **Total Alerts:** 26 **Generated:**  
2025-11-01T08:24:56.879Z

---

## Executive Summary

A single low-severity alert was detected, indicating a PAM login session opening event on the Wazuh server. The alert originated from an internal system and does not indicate an external threat or compromise. No indicators of malicious activity were found in the alert context, and no associated IoCs or behavioral anomalies were identified. The event is consistent with routine system authentication activity. No infrastructure or external threat sources were involved. The alert has been evaluated and classified as non-actionable at this time.

## Key Findings

- One low-severity PAM login session event detected on the Wazuh server.
- Event is internal, with no evidence of external or lateral threat involvement.
- No associated HTTP context, suspicious URLs, or data exfiltration patterns.
- No geolocation or country assignment applicable—internal system activity.
- No historical or contextual correlation with known attack patterns.

## Top Priority Threats

| IP Address | Type     | Country | Direction | Activity | Severity | Confidence | Count |
|------------|----------|---------|-----------|----------|----------|------------|-------|
| —          | External | —       | Inbound   | —        | CRITICAL | High       | 1     |

## Immediate Actions Required

1. Monitor Wazuh server for repeated PAM login events.
2. Verify that the login session was authorized and expected.
3. Confirm no unauthorized accounts or session persistence detected.
4. Ensure PAM configuration remains hardened per security baseline.
5. No immediate containment or network isolation required.
6. *Technical Summary:*\*
7. --
