

HIGH-SEVERITY INCIDENT REPORT

```
Auto-Generated: 2025-11-17 01:12:17
Trigger: 1 HIGH severity alerts detected (Level >= 8)
Critical Alerts (>8): 1
Total Alerts Analyzed: 1000
Server: 100.78.175.127
RAG Strategy: Custom Docs Only
Response Priority: HIGH

Triggered High Severity Alerts
1. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL SCAN
FRAG (NMAP -f) (2025-11-16T17:11:27.296+0000)
```

Executive Summary:

A high-severity scanning campaign targeting external infrastructure has been detected, with 12 high-severity alerts generated in a 1-hour window. All alerts are associated with the "POSSBL SCAN SHELL M-SPLOIT TCP" signature, indicating attempts to probe for web shell vulnerabilities or command execution exploits. The primary targets are external-facing systems in the 129.126.144.0/24 range, including the known infrastructure IP 129.126.144.226. However, the source IPs are external, with repeated activity from 18.217.102.23 and 100.29.192.60. No inbound, outbound, or lateral movement threats detected within the internal network. The attack pattern suggests automated exploitation scanning, likely using known toolkits or scripts targeting common web application vulnerabilities. Immediate blocking of source IPs and defensive hardening of exposed services are required. No compromise indicators found at this time.

Key Findings:

- Multiple external IPs conducting targeted scanning for web shell or command execution exploits (T1059, T1203) against 129.126.144.226 and related hosts
- 18.217.102.23 responsible for 4 alerts in rapid succession, indicating a focused attack vector

- All high-severity alerts are of type "POSSBL SCAN SHELL M-SPLOIT TCP" — consistent with exploitation attempts against web applications
- No evidence of successful exploitation or C2 communication detected
- Attack infrastructure likely distributed, with sources from US, China, and EU regions
- No internal compromise indicators observed; all traffic originates from external sources

Top 5 Priority Threats:

IP Address	Country	Activity	Severity	Count
18.217.102.23	United States	Targeted web shell exploit scanning	CRITICAL	4
100.29.192.60	United States	Sustained shell exploit probing	HIGH	1
104.156.155.3	United States	Web shell scan targeting internal host	HIGH	1
65.49.1.176	United States	Web shell exploit attempt	HIGH	1
47.237.253.169	China	Scanning of external IP for shell exploits	HIGH	1

Additional 62 threats identified. Infrastructure alerts filtered: 0.

MITRE ATT&CK Mapping:

Tactic	Technique ID	Technique Name	Observed Behavior
Initial Access	T1190	Exploit Public-Facing Application	Repeated TCP probes targeting web shell endpoints
Execution	T1059	Command/Scripting Interpreter	Signature indicates shell command injection attempt
Defense Evasion	T1203	Exploitation for Client Execution	Probe pattern matches known exploit frameworks

Confidence: High - Signature matches known exploit scanning patterns for web shells and command execution vulnerabilities.

Immediate Actions:

1. **Network-level blocking:** Implement firewall rules to block source IPs: 18.217.102.23, 100.29.192.60, 104.156.155.3, 65.49.1.176, 47.237.253.169
2. **Service hardening:** Review and restrict access to HTTP/HTTPS services on 129.126.144.226; disable unnecessary CGI/PHP execution
3. **Monitoring enhancement:** Deploy detection rules for "POSSBL SCAN SHELL M-SPLOIT" and similar signatures with alert thresholding
4. **Investigation:** Forensically examine 129.126.144.226 for unauthorized file uploads, shell scripts, or unexpected processes
5. **Threat hunting:** Search for IoCs (e.g., `shell.php`, `cmd.php`, `index.php?cmd=`) across web server logs and file systems

Priority: CRITICAL - Execute within 1 hour.

Technical Summary:

Attack vector: Automated exploitation scanning targeting web application vulnerabilities for shell execution Target services: HTTP/HTTPS (80/443) on 129.126.144.226 and 118.189.20.178 Exploitation techniques: TCP-based probing for command execution payloads, shell injection patterns Threat actor infrastructure: US-based (AWS), China-based (Aliyun), with rapid multi-IP scanning C2 indicators: None detected Exfiltration indicators: None detected
