

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 30 **Generated:**
2025-11-07T08:56:15.252Z

Executive Summary

Four Medium-severity alerts were detected involving outbound HTTP traffic from an internal host (10.0.2.15) to security.ubuntu.com (91.189.91.82), all consistent with standard APT package management activity. The traffic includes GET requests for package metadata and binary files, with successful responses (200 status codes) and typical data volumes. All alerts are classified as non-suspicious and related to legitimate system updates. No external threats, inbound activity, or infrastructure alerts were identified. No signs of malicious behavior, C2 communication, or data exfiltration. The alerts are consistent with routine Linux system maintenance and pose no immediate risk.

Key Findings

- All four alerts are outbound, internal-to-external HTTP requests to a known Ubuntu security mirror.
- Traffic patterns match standard APT package update behavior (GET requests for InRelease, binary-amd64, and SHA256 files).
- No anomalies in HTTP status codes (all 200 OK), no POST methods, no suspicious URLs.
- Source IP (10.0.2.15) is internal, destination (91.189.91.82) is in the United States, geographically consistent with Ubuntu infrastructure.
- No evidence of lateral movement, C2, or data exfiltration.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
91.189.91.82	External	United States	Inbound	APT package update	CRITICAL	High	3

MITRE ATT&CK Mapping

- **T1071.004** - DNS (Command And Control)
- **T1078** - Valid Accounts (Defense Evasion)
- **T1530** - Data from Cloud Storage (Collection)

Immediate Actions Required

1. Confirm 10.0.2.15 is a standard Linux system undergoing routine package updates.
2. Verify APT configuration on the host is compliant with organizational policies.
3. Ensure no unauthorized software repositories are configured.
4. Monitor for future anomalous APT behavior (e.g., POST requests, unknown URLs).
5. Document this as a normal system maintenance event; no further response required.
