

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 1500 **Generated:** 2025-11-01T10:24:06.836Z

Executive Summary

A manual analysis of 1500 alerts identified 29 medium-severity outbound communications from an internal host (10.0.2.15) to external IPs in Singapore. All alerts are categorized as "outbound" and stem from internal systems, not infrastructure. The pattern involves repeated HTTP GET requests to /generate_204 endpoints with a consistent timestamp parameter, using the Go-http-client User-Agent. No data exfiltration or malicious payloads were detected, but the behavior aligns with beaconing or heartbeat traffic. No external threats were observed. The activity is consistent with automated internal processes or compromised systems. Immediate investigation into endpoint 10.0.2.15 is recommended to determine legitimacy and prevent potential C2 communication.

Key Findings

- 29 outbound HTTP GET requests from 10.0.2.15 to external IPs in Singapore.
- All destinations are in Singapore (172.237.72.x and 172.237.66.x), suggesting a regional infrastructure.
- Consistent URL pattern: `/generate_204?t=1761962692`, indicating periodic beaconing.
- HTTP status 204 (No Content) suggests no data transfer, but repeated calls indicate active communication.
- User-Agent

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
172.237.72.8	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.72.43	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.72.79	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.66.30	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.72.8	External	Singapore	Inbound	Repeated beaconing pattern	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1048** - Exfiltration Over Alternative Protocol (Exfiltration)

- **T1071.004** - DNS (Command And Control)
- **T1566** - Phishing (Initial Access)

Immediate Actions Required

1. Isolate and investigate endpoint 10.0.2.15 for unauthorized processes or malware.
2. Review process logs on 10.0.2.15 for Go-based applications or scripts.
3. Block outbound HTTP traffic to 172.237.72.x and 172.237.66.x subnets at firewall.
4. Monitor for additional beaconing to similar domains or IPs.
5. Verify if this behavior is part of authorized software or service.
