

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 3 **Generated:** 2025-11-05T22:49:06.731Z

Executive Summary

Three alerts were triggered on the Suricata NIDS sensor (192.168.56.104) related to known vulnerabilities in the linux-image-5.15.0-161-generic kernel package. All alerts originate from the internal monitoring infrastructure and are classified as non-threats, with no external or lateral activity detected. The alerts are related to CVE-2017-13165, CVE-2024-41935, and CVE-2025-38608, all affecting the same kernel version. While the first two are well-documented, the third remains under analysis. No malicious traffic or compromise indicators were observed. These alerts indicate unpatched kernel vulnerabilities within the internal monitoring host. While patching is recommended to mitigate exposure, no immediate external threat or exploitation was detected.

Key Findings

- All alerts originate from the Suricata NIDS sensor (192.168.56.104), classified as infrastructure.
- No external IPs, outbound traffic, or lateral movement detected.
- Two high-severity alerts (CVE-2017-13165, CVE-2024-41935) are valid and documented.
- One low-severity alert (CVE-2025-38608) is pending analysis and lacks public details.
- No evidence of exploitation, scanning, or command-and-control activity.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
192.168.56.104	Internal	-	Inbound	Vulnerability Alert	LOW	High	1

MITRE ATT&CK Mapping

- **T1190** - Exploit Public-Facing Application (Initial Access)
- **T1595** - Active Scanning (Reconnaissance)

Immediate Actions Required

1. Patch the linux-image-5.15.0-161-generic kernel on the Suricata NIDS sensor (192.168.56.104).
2. Validate patch deployment and restart the sensor if required.
3. Monitor for recurrence of CVE-2025-38608 alerts once official details are published.
4. Review patch management policy for monitoring systems.
5. Confirm no downstream impact on IDS/IPS detection capabilities post-patch.
