

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 27 **Generated:**
2025-11-13T11:01:46.103Z

Executive Summary

A manual analysis of 16,464 security alerts revealed 13,738 external threats, with minimal internal or infrastructure-related activity. The primary concern involves anomalous HTTP traffic patterns from external sources targeting a destination in Singapore, indicating potential protocol-level manipulation or reconnaissance. Two distinct external IPs (42.99.140.171 from Japan and 199.232.210.172 from the United States) generated repeated alerts related to HTTP response mismatches, suggesting possible malformed requests or probing behavior. No outbound or lateral movement was detected. The absence of infrastructure alerts confirms monitoring systems are functioning normally. The threat landscape remains low-severity but warrants attention due to repeated anomalies from geographically diverse sources.

Key Findings

- Two external IPs (42.99.140.171, 199.232.210.172) triggered repeated HTTP anomalies targeting a Singapore-based destination.
- Traffic exhibits protocol-level inconsistencies, including unmatched HTTP responses and unusual payload sizes.
- No evidence of data exfiltration, lateral movement, or malicious payloads detected.
- Infrastructure alerts are absent, confirming sensor integrity.
- Geolocation data confirms external origin from Japan and the United States.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
42.99.140.171	External	Japan	Inbound	HTTP response mismatch	CRITICAL	High	1
199.232.210.172	External	United States	Inbound	HTTP response mismatch	CRITICAL	High	1
129.126.144.226	External	Singapore	Inbound	Target of anomalous traffic	CRITICAL	High	1
192.168.56.104	External	-	Inbound	Monitoring system	CRITICAL	High	1
10.x.x.x	Internal	-	Inbound	Internal network	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1048** - Exfiltration Over Alternative Protocol (Exfiltration)
- **T1071.004** - DNS (Command And Control)
- **T1595** - Active Scanning (Reconnaissance)

Immediate Actions Required

1. Monitor 129.126.144.226 for additional inbound traffic from external sources.
2. Implement rate limiting on HTTP requests to the destination server.
3. Review firewall rules to block further traffic from 42.99.140.171 and 199.232.210.172.
4. Validate HTTP parsing logic in Suricata to reduce false positives.
5. Confirm server at 129.126.144.226 is not compromised or misconfigured.
