

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 41 **Generated:**
2025-10-31T18:42:00.103Z

Executive Summary

A single medium-severity alert was detected involving outbound HTTP traffic from an internal host (10.0.2.15) to security.ubuntu.com (91.189.91.83). The traffic is consistent with standard Ubuntu APT package management activity, using a recognized GNU/Linux APT User-Agent. No malicious indicators were found in the HTTP context, including the GET request to a legitimate Ubuntu security repository. The destination is a known infrastructure node in the United States, with no signs of data exfiltration or command-and-control behavior. The alert is classified as non-suspicious and falls under informational traffic patterns. No infrastructure or external threat indicators are present. The system remains secure with no evidence of compromise.

Key Findings

- Outbound HTTP traffic from internal host 10.0.2.15 to security.ubuntu.com (91.189.91.83) observed.
- Request pattern matches standard APT package update behavior (GET, SHA256 hash lookup).
- No malicious payload, suspicious URL, or data exfiltration detected.
- Traffic originated from an internal system and is consistent with system maintenance.
- No signs of lateral movement, C2, or compromise indicators.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
91.189.91.83	External	United States	Inbound	APT package update	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1003.002** - Security Account Manager (Credential Access)

Immediate Actions Required

1. Confirm system 10.0.2.15 is a known, authorized Ubuntu host.
2. Validate APT update logs to confirm integrity of package retrieval.
3. Ensure no unauthorized repositories are configured on the host.
4. Monitor for repeated APT-like traffic to non-standard domains.
5. Maintain current alert policy—no action required for this event.
6. *Technical Summary:**
7. --
