

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 43 **Generated:** 2025-11-01T08:43:31.643Z

Executive Summary

A manual analysis of 1229 alerts reveals 29 medium-severity outbound communications from an internal host (10.0.2.15) to external IPs in Singapore. These alerts are associated with the "ET INFO Go-http-client User-Agent Observed Outbound" signature, indicating the use of a Go-based HTTP client. All connections are HTTP GET requests to endpoints with the path `/generate_204?t=...`, returning a 204 No Content status, suggesting heartbeat or keep-alive traffic. The destination IPs (172.237.72.8, 172.237.72.43, 172.237.72.79, 172.237.66.30) are geolocated to Singapore, a region frequently associated with infrastructure used in C2 operations. Although no direct malicious payload or data exfiltration is observed, the pattern is consistent with beaconing behavior. No external threats or inbound activity were detected. The alerts are not infrastructure-related and originate from an internal host. Immediate investigation into the source host is recommended to rule out compromise.

Key Findings

- 29 outbound HTTP GET requests from 10.0.2.15 to four external IPs in Singapore using Go HTTP client User-Agent.
- All requests target `/generate_204?t=...`, returning 204 No Content, indicating potential beaconing.
- No data transfer (length = 0), but repeated traffic suggests periodic communication.
- No evidence of malware, data exfiltration, or command execution.

- All traffic is allowed and classified as low severity, but pattern is suspicious and warrants investigation.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
172.237.72.8	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.72.43	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.72.79	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
172.237.66.30	External	Singapore	Inbound	Beaconing (GET / generate_204)	CRITICAL	High	1
10.0.2.15	Internal	N/A	Inbound	Source of suspicious outbound traffic	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1071.004** - DNS (Command And Control)
- **T1048** - Exfiltration Over Alternative Protocol (Exfiltration)
- **T1059.001** - PowerShell (Execution)
- **T1071.001** - Web Protocols (Command And Control)

Immediate Actions Required

1. Isolate and investigate host 10.0.2.15 for potential malware or unauthorized software.
2. Check for the presence of Go-based applications or services running on the host.
3. Review system logs and process execution history on 10.0.2.15 for anomalous activity.
4. Block outbound HTTP traffic to 172.237.72.8, 172.237.72.43, 172.237.72.79, and 172.237.66.30 at the firewall.
5. Add YARA rule or SIEM correlation to detect future Go-http-client beaconing.
6. *Technical Summary:**
7. --
