

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 17 **Generated:**
2025-11-15T15:05:32.285Z

Executive Summary

A single medium-severity alert was detected from the Suricata NIDS sensor (192.168.56.104), indicating a "SURICATA VLAN unknown type" event with VLAN IDs 0 and 6. The alert falls under the "Generic Protocol Command Decode" category and has a rule severity of 3. The event is not classified as an infrastructure alert, internal threat, or external threat, with no directional context. No geolocation data is available, and the event does not indicate malicious activity. Given the absence of indicators of compromise, external threat vectors, or behavioral anomalies, this is likely a benign protocol decoding event related to non-standard VLAN tagging. No immediate risk to the network is identified.

Key Findings

- One medium-severity alert triggered by Suricata due to unknown VLAN type (VLAN 0 and 6).
- Alert originates from the internal NIDS sensor (192.168.56.104), not a threat source.
- No evidence of external communication, data exfiltration, or malicious behavior.
- No historical correlation with known attack patterns or IoCs.
- No country assignment or geolocation available for internal infrastructure.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
No external threats identified	External	—	Inbound	—	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1046** - Network Service Discovery (Discovery)
- **T1059.001** - PowerShell (Execution)
- **T1071.004** - DNS (Command And Control)

Immediate Actions Required

1. Confirm VLAN configuration in network infrastructure to validate VLAN 0 and 6 usage.
2. Verify if VLAN 0 is a valid tag in the current network environment (typically invalid).
3. Review switch and trunk configuration for misconfigured or malformed VLAN tagging.
4. Monitor for recurrence of the alert to assess if it's intermittent or persistent.
5. Update Suricata rule set to suppress false positives if VLAN 0/6 are legitimate in context.
