

Security Operations Center - Threat Analysis Report

Threat Level: MEDIUM | **Total Alerts:** 14 **Generated:**
2025-11-15T15:06:26.384Z

Executive Summary

A single medium-severity alert was detected from the Suricata NIDS sensor (192.168.56.104) indicating a "SURICATA VLAN unknown type" event. The alert originates from internal network traffic with VLAN tags 0 and 6, but no associated external threat or malicious behavior was identified. The alert falls under generic protocol decoding and does not indicate active exploitation or compromise. Given the absence of external threats, lateral movement, or data exfiltration indicators, and no historical context of similar events, this alert is classified as low-risk noise from internal VLAN configuration. No immediate action is required beyond monitoring for recurrence.

Key Findings

- One internal VLAN decoding alert detected from Suricata sensor (192.168.56.104).
- Alert triggered by VLAN tags 0 and 6, indicating potential misconfiguration or non-standard VLAN usage.
- No external IP, suspicious payload, or behavioral indicators of compromise detected.
- Threat classification confirms no infrastructure, internal, or external threat involvement.
- No historical correlation found; isolated event with low confidence in malicious intent.

Top Priority Threats

IP Address	Type	Country	Direction	Activity	Severity	Confidence	Count
-	External	-	Inbound	-	CRITICAL	High	1

MITRE ATT&CK Mapping

- **T1048** - Exfiltration Over Alternative Protocol (Exfiltration)
- **T1071.004** - DNS (Command And Control)
- **T1595** - Active Scanning (Reconnaissance)

Immediate Actions Required

1. Monitor VLAN traffic patterns on tagged interfaces (VLAN 0 and 6) for recurring anomalies.
2. Validate VLAN configuration on network switches and endpoints to ensure compliance with policy.
3. Confirm whether VLAN 0 is intended (non-standard; typically reserved for untagged traffic).
4. Review Suricata rule 2200067 for false positive tuning if similar alerts persist.
5. Document alert for future reference in network configuration audits.
