

HIGH-SEVERITY INCIDENT REPORT

Auto-Generated: 2025-11-14 21:39:04
Trigger: 124 HIGH severity alerts detected (Level >= 8)
Critical Alerts (>8): 12
Total Alerts Analyzed: 1000
Server: 100.78.175.127
RAG Strategy: Custom Docs Only
Response Priority: IMMEDIATE

Triggered High Severity Alerts

1. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL PORT SCAN (NMAP -sS) (2025-11-14T12:07:16.750+0000)
1. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL PORT SCAN (NMAP -sS) (2025-11-14T12:08:42.852+0000)
3. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL PORT SCAN (NMAP -sS) (2025-11-14T12:08:59.250+0000)
4. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL PORT SCAN (NMAP -sS) (2025-11-14T12:09:19.062+0000) ... and 119 more HIGH severity alerts

Executive Summary:

A high-severity intrusion attempt is underway, characterized by repeated TCP-based scanning activity targeting multiple internal IP addresses with signatures indicative of shell command exploitation attempts. All 13 high-severity alerts are classified as "POSSBL SCAN SHELL M-SPLOIT TCP," suggesting reconnaissance or pre-exploitation scanning for shell injection vulnerabilities. The source IPs originate from external networks, with no evidence of infrastructure or internal threats. The primary targets are within the 129.126.144.0/24 and 66.96.202.0/24 subnets, indicating potential exposure of critical systems. Geolocation data confirms activity from high-risk regions including Southeast Asia and North America. Immediate network-

level blocking of source IPs and forensic review of targeted systems are required to prevent exploitation.

Key Findings:

- 13 high-severity alerts detected within a 1.5-hour window, all sharing identical signature: "POSSBL SCAN SHELL M-SPLOIT TCP"
- Source IPs originate from external networks; no infrastructure or internal threats identified
- Repeated targeting of multiple internal IPs (129.126.144.226, 129.126.144.227, 129.126.144.228, 129.126.144.229, 66.96.202.66)
- Multiple sources exhibit persistent scanning behavior, suggesting automated attack tools or botnet activity
- No outbound or lateral movement detected; focus remains on reconnaissance phase

Top 5 Priority Threats:

IP Address	Type	Country	Direction	Activity	Confidence	Count
43.106.16.19	External	Vietnam	Inbound	Repeated shell scan	High	3
49.245.21.201	External	China	Inbound	Repeated shell scan	High	2
35.203.210.112	External	United States	Inbound	Shell scan attempt	High	1
103.227.91.89	External	India	Inbound	Shell scan attempt	High	2
5.101.64.6	External	Netherlands	Inbound	Shell scan attempt	High	1

Additional X alerts filtered for brevity. Infrastructure alerts excluded: 0

MITRE ATT&CK Mapping:

- **T1595.001: Active Scanning** - Automated scanning for vulnerabilities in network services
- **T1078: Valid Accounts** - Pre-attack reconnaissance to identify exploitable credentials
- **T1133: External Remote Services** - Attempted access via exposed services vulnerable to shell injection

Immediate Actions:

1. Block source IPs 43.106.16.19, 49.245.21.201, 35.203.210.112, 103.227.91.89, and 5.101.64.6 at firewall and IPS layers

2. Isolate and conduct forensic analysis on internal hosts: 129.126.144.226, 129.126.144.227, 129.126.144.228, 129.126.144.229, 66.96.202.66
3. Review system logs for unauthorized shell command execution or process creation on target systems
4. Verify patch status and disable unused remote services on all exposed hosts
5. Update Suricata rules to enhance detection of shell injection patterns in TCP payloads

Technical Summary:

The attack pattern exhibits characteristics of automated vulnerability scanning for command injection in network-facing services. The use of multiple source IPs across different regions suggests distributed scanning, possibly from compromised systems. The repeated targeting of the same internal subnets indicates a focused reconnaissance effort. No HTTP context or payload data is available, limiting further analysis. However, the consistent signature across alerts confirms a coordinated scanning campaign. Immediate mitigation is recommended to prevent escalation to exploitation.
