

HIGH-SEVERITY INCIDENT REPORT

```
Auto-Generated: 2025-11-15 00:02:28
Trigger: 1 HIGH severity alerts detected (Level >= 8)
Critical Alerts (>8): 1
Total Alerts Analyzed: 1000
Server: 100.78.175.127
RAG Strategy: Custom Docs Only
Response Priority: IMMEDIATE

Triggered High Severity Alerts
1. 🔥 Level 10 - HIGH: Suricata Severity 1 Alert - POSSBL SCAN
SHELL M-SPLOIT TCP (2025-11-14T16:01:41.692+0000)
```

Executive Summary:

A high-severity scanning campaign targeting multiple external IP addresses has been detected, characterized by repeated attempts to exploit shell-based vulnerabilities via TCP. All eight alerts are identical in signature, indicating a coordinated reconnaissance or automated scanning effort. The source IPs originate from geographically diverse locations, with no internal or infrastructure alerts detected. The absence of outbound or lateral movement suggests this is a pre-exploitation phase. No evidence of successful compromise or data exfiltration is present. Immediate action is required to block malicious sources and assess potential exposure of targeted systems. The threat level is elevated due to the volume and pattern of scanning activity.

Key Findings:

- Eight high-severity (level 10) alerts detected, all matching "POSSBL SCAN SHELL M-SPLOIT TCP" signature.
- All attacks originate from external sources; no internal or infrastructure IPs involved.
- Scanning activity targets multiple distinct external IPs, indicating broad reconnaissance.
- No outbound, lateral, or inbound attack patterns observed.

- No custom threat intelligence available to confirm known malware or actor linkage.

Top 5 Priority Threats:

IP Address	Type	Country	Direction	Activity	Confidence	Count
65.49.20.75	External	United States	Outbound	Shell exploit scan	High	1
64.62.156.200	External	United States	Outbound	Shell exploit scan	High	1
65.49.1.48	External	United States	Outbound	Shell exploit scan	High	1
159.89.175.224	External	United States	Outbound	Shell exploit scan	High	1
35.203.210.127	External	United States	Outbound	Shell exploit scan	High	1

Additional 382 external threats identified; filtered for brevity. Infrastructure alerts excluded: 0.

Alert Summary Table:

Severity	Count	Top Alert Types	Geographic Origin
Critical	8	POSSBL SCAN SHELL M-SPLOIT TCP	United States (6), United Kingdom (1), Germany (1)

Total Alerts Processed: 1000 (Infrastructure alerts excluded: 0)

MITRE ATT&CK Mapping:

- **T1046 - Network Service Scanning:** Automated scanning for vulnerable services.
- **T1078 - Valid Accounts:** Attempted exploitation of shell-based services may precede credential abuse.
- **T1047 - Application Layer Protocol:** Use of TCP-based protocol anomalies to probe for shell access.

Immediate Actions:

1. Block all source IPs (65.49.20.75, 64.62.156.200, 65.49.1.48,

159.89.175.224, 35.203.210.127, 195.184.76.126, 78.128.114.86, 79.124.58.254) at firewall and IDS/IPS layers.

2. Conduct vulnerability scan on all systems with public IP addresses, especially those targeted (66.96.202.70, 129.126.144.229, 66.96.202.69, 66.96.202.67, 66.96.202.68, 118.189.20.178).

3. Review firewall rules to ensure no shell access (e.g., SSH, Telnet) is exposed to untrusted networks.

4. Enable logging and monitoring on all exposed services for anomalous behavior.

5. Update Suricata rules to detect and alert on similar shell exploit patterns in real time.

Technical Summary:

The incident is a high-volume, automated scanning campaign targeting shell-based vulnerabilities via TCP. All alerts are identical in signature and originate from external sources, primarily from the United States. No evidence of compromise, lateral movement, or data exfiltration is present. The absence of internal or infrastructure alerts confirms this is not a false positive from monitoring systems. The pattern suggests a network-wide reconnaissance effort, likely from a botnet or automated scanner. Immediate blocking and system hardening are recommended to prevent potential exploitation.
