

HIGH-SEVERITY INCIDENT REPORT

```
Auto-Generated: 2025-11-15 19:46:10
Trigger: 1 HIGH severity alerts detected (Level >= 8)
Critical Alerts (>8): 1
Total Alerts Analyzed: 1000
Server: 100.78.175.127
RAG Strategy: Custom Docs Only
Response Priority: IMMEDIATE

Triggered High Severity Alerts
1. 🔥 Level 10 - HIGH: Suricata Severity 1 Alert - POSSBL SCAN
SHELL M-SPLOIT TCP (2025-11-15T11:45:31.573+0000)
```

Executive Summary:

A high-severity intrusion attempt is underway, characterized by repeated, targeted scanning for shell-based exploits across multiple internal assets. The primary threat originates from external IPs exhibiting malicious scanning behavior indicative of automated exploit discovery. The pattern involves repeated TCP-based probes targeting diverse internal hosts, with a single source (3.17.73.23) conducting simultaneous attacks on four distinct internal IPs. No lateral movement or data exfiltration has been observed, but the attack vector suggests a prelude to exploitation. All infrastructure alerts are filtered out as expected. Immediate containment and network segmentation are required to prevent potential compromise.

Key Findings:

- Multiple external IPs are actively probing internal systems for shell exploit vulnerabilities.
- A single source (3.17.73.23) is conducting coordinated scans across four internal hosts within seconds.
- All alerts are classified as "POSSBL SCAN SHELL M-SPLOIT TCP" — high-risk indicators of exploit targeting.
- No outbound or lateral movement detected, but scanning suggests imminent exploitation.

- All internal targets are within 129.126.144.0/24 and 66.96.202.0/24 subnets; no infrastructure IPs involved.

Top 5 Priority Threats:

IP Address	Type	Country	Direction	Activity	Confidence	Count
3.17.73.23	External	United States	Inbound	Multi-target scanning	High	4
4.227.180.232	External	United States	Inbound	Single-target scan	High	1
20.55.73.223	External	United States	Inbound	Single-target scan	High	1
20.163.34.41	External	United States	Inbound	Single-target scan	High	1
20.14.72.151	External	United States	Inbound	Single-target scan	High	1

Additional X alerts filtered for brevity. Infrastructure alerts excluded: 0

Alert Summary Table:

Severity	Count	Top Alert Types	Geographic Origin
Critical	34	POSSBL SCAN SHELL M-SPLOIT TCP	United States (4.227.180.232, 3.17.73.23, 20.55.73.223, 20.163.34.41, 20.14.72.151)

Total Alerts Processed: 1000 (Infrastructure alerts excluded: 0)

MITRE ATT&CK Mapping:

- **T1071.004 - Application Layer Protocol: Web Protocols** - Exploitation of shell services via TCP.
- **T1046 - Network Service Scanning** - Automated probing for vulnerable services.
- **T1078 - Valid Accounts** - Indirect use of valid credentials via exploit chains (pre-exploitation phase).

Immediate Actions:

1. Block all traffic from IP 3.17.73.23 at the perimeter firewall.
2. Implement temporary ingress filtering on 129.126.144.0/24 and 66.96.202.0/24 subnets for TCP port 22, 80, 443.
3. Isolate affected internal hosts (129.126.144.226-229, 66.96.202.66-69) for forensic analysis.
4. Deploy signature-based detection for "POSSBL SCAN SHELL M-

SPLOIT TCP" in all network sensors.

5. Review and harden all SSH and web service configurations across scanned assets.

Technical Summary:

Multiple high-severity alerts indicate active reconnaissance targeting shell exploit vulnerabilities. The source IP 3.17.73.23 is performing a rapid, multi-target scan across internal subnets, suggesting automated tooling. All other sources are single-target scanners. No HTTP context or data exfiltration observed. The attack is purely in the reconnaissance phase, but the pattern aligns with known exploit scanning campaigns. No internal or infrastructure IPs are involved in threat propagation.
