

HIGH-SEVERITY INCIDENT REPORT

Auto-Generated: 2025-11-16 01:55:27
Trigger: 23 HIGH severity alerts detected (Level >= 8)
Critical Alerts (>8): 14
Total Alerts Analyzed: 1000
Server: 100.78.175.127
RAG Strategy: Custom Docs Only
Response Priority: IMMEDIATE

Triggered High Severity Alerts

1. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL SCAN FRAG (NMAP -f) (2025-11-15T14:22:34.073+0000)
2. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL SCAN FRAG (NMAP -f) (2025-11-15T14:22:34.082+0000)
3. 🔥 Level 10 - HIGH: Suricata Severity 1 Alert - POSSBL SCAN SHELL M-SPLOIT TCP (2025-11-15T14:56:27.190+0000)
4. 🔥 Level 10 - HIGH: Suricata Severity 1 Alert - POSSBL SCAN SHELL M-SPLOIT TCP (2025-11-15T15:45:32.175+0000) ... and 18 more HIGH severity alerts

Executive Summary:

A high-severity intrusion attempt is underway, characterized by repeated scanning activity targeting multiple external IP addresses with signatures indicative of shellcode exploitation attempts. The primary pattern involves TCP-based scanning for potential remote code execution vulnerabilities, consistent with automated exploit frameworks. All 14 high-severity alerts are classified as external threats, with no internal or infrastructure-related alerts detected. The attacks originate from geographically dispersed external IPs, suggesting coordinated reconnaissance. No outbound or lateral movement indicators are present. Immediate mitigation is required to prevent potential exploitation of exposed services. No custom threat

intelligence is available for correlation, but the attack pattern aligns with known pre-exploitation scanning behavior.

Key Findings:

- 14 high-severity alerts detected, all classified as external threats.
- Dominant signature: "POSSBL SCAN SHELL M-SPLOIT TCP" indicating potential exploitation attempts.
- Scanning activity targets multiple external IPs, including 118.189.20.178, 66.96.202.67, and 129.126.144.226.
- Attack sources are distributed across multiple countries, with no single dominant geographic origin.
- No evidence of data exfiltration, lateral movement, or C2 communication detected.

Top 5 Priority Threats:

IP Address	Type	Country	Direction	Activity	Confidence	Count
103.176.90.4	External	India	Inbound	Shellcode Scan	High	2
62.60.131.79	External	Germany	Inbound	Shellcode Scan	High	1
20.65.193.55	External	United States	Inbound	Shellcode Scan	High	1
135.237.126.199	External	United States	Inbound	Shellcode Scan	High	1
130.131.162.82	External	United States	Inbound	Shellcode Scan	High	1

Alert Summary Table:

Severity	Count	Top Alert Types	Geographic Origin
Critical	14	POSSBL SCAN SHELL M-SPLOIT TCP	India, Germany, United States

Total Alerts Processed: 1000 (Infrastructure alerts excluded: 0)

MITRE ATT&CK Mapping:

- **T1078: Valid Accounts** – Scanning for vulnerable services may precede credential-based access.
- **T1595: Active Scanning** – Repeated TCP scans targeting potential exploit vectors.
- **T1135: Security Controls Disabling** – Potential precursor to exploit execution (if successful).

Immediate Actions:

1. Block all source IPs (103.176.90.4, 62.60.131.79, 20.65.193.55, 135.237.126.199, 130.131.162.82) at firewall level.
2. Implement rate-limiting on inbound TCP connections to critical public-facing services.
3. Review firewall and IDS rules to detect and block similar exploit patterns.
4. Conduct vulnerability scan on target IPs (118.189.20.178, 66.96.202.67, 129.126.144.226) for known exploits.
5. Monitor for any subsequent exploitation attempts or anomalous outbound traffic.

Technical Summary:

The incident is a high-volume inbound scanning campaign targeting potential shellcode exploitation vectors. All alerts are external in origin and consistent with automated vulnerability scanning tools. No internal or infrastructure alerts were detected. The pattern does not indicate active compromise but represents a high-risk pre-exploitation phase. No custom threat intelligence is available for direct correlation. Immediate blocking and monitoring are recommended to prevent escalation.
