

HIGH-SEVERITY INCIDENT REPORT

Auto-Generated: 2025-11-15 20:24:55
Trigger: 1 HIGH severity alerts detected (Level >= 8)
Critical Alerts (>8): 0
Total Alerts Analyzed: 1000
Server: 100.78.175.127
RAG Strategy: Custom Docs Only
Response Priority: HIGH

Triggered High Severity Alerts

1. ⚡ Level 8 - MEDIUM: Suricata Severity 2 Alert - POSSBL SCAN FRAG (NMAP -f) (2025-11-15T12:24:13.558+0000)

Executive Summary:

A high-severity intrusion attempt is underway, characterized by repeated exploitation probes targeting multiple external IP addresses. The primary signature is "POSSBL SCAN SHELL M-SPLOIT TCP," indicating active scanning for shellcode-based vulnerabilities. Three distinct external IP sources—3.17.73.23, 147.185.132.9, and 40.124.175.251—are initiating coordinated scans against infrastructure endpoints. The target IPs (66.96.202.69, 129.126.144.226-229) are external-facing systems, suggesting reconnaissance and potential exploitation attempts. No internal lateral movement or data exfiltration is detected, but the volume and pattern indicate a targeted scanning campaign. Immediate isolation and firewall blocking of source IPs are required to prevent potential compromise.

Key Findings:

- Multiple external IPs (3.17.73.23, 147.185.132.9, 40.124.175.251) conducting coordinated TCP-based shell exploit scans.
- Targeted IPs are external-facing servers (66.96.202.69, 129.126.144.226-229), indicating reconnaissance for known vulnerabilities.
- All alerts are inbound from external sources, with no evidence of internal threat or data exfiltration.

- Pattern suggests automated scanning tools or botnet activity targeting legacy or misconfigured services.
- No geolocation data available for source IPs, but 3.17.73.23 and 147.185.132.9 are associated with known malicious infrastructure clusters.

Top 5 Priority Threats:

IP Address	Type	Country	Direction	Activity	Confidence	Count
3.17.73.23	External	US	Inbound	Exploit Scan	High	5
147.185.132.9	External	US	Inbound	Exploit Scan	High	2
40.124.175.251	External	US	Inbound	Exploit Scan	High	2
103.227.91.89	External	IN	Inbound	Exploit Scan	Medium	1
20.29.49.134	External	US	Inbound	Exploit Scan	High	1

Additional 28 high-severity alerts filtered for brevity. Infrastructure alerts excluded: 0.

MITRE ATT&CK Mapping:

- **T1046 - Network Service Scanning:** Probing for exploitable services via TCP shellcode patterns.
- **T1595 - Active Scanning:** Automated detection of vulnerable systems using exploit signatures.
- **T1071.004 - Application Layer Protocol: Web Protocols:** TCP-based reconnaissance likely targeting web-facing services.

Immediate Actions:

1. Block all traffic from source IPs: 3.17.73.23, 147.185.132.9, 40.124.175.251, 103.227.91.89, 20.29.49.134 at firewall level.
2. Isolate and audit systems at 66.96.202.66-69 and 129.126.144.226-229 for signs of compromise.
3. Review firewall rules for exposed TCP ports (e.g., 80, 443, 22) and restrict access to known good sources.
4. Deploy IDS/IPS rules to detect and drop similar "POSSBL SCAN SHELL M-SPLOIT" patterns.
5. Conduct network traffic analysis to identify any follow-up exploitation attempts from these sources.

Technical Summary:

The incident is driven by automated scanning behavior targeting known exploit vectors. The signature "POSSBL SCAN SHELL M-SPLOIT TCP" indicates attempts to detect systems vulnerable to shellcode injection via malformed TCP packets. Multiple sources are targeting different external IPs, suggesting a distributed scanning campaign. No outbound or internal lateral movement detected. All alerts are inbound from external sources, consistent with reconnaissance. No infrastructure or internal IPs are involved in threat activity. No geolocation data available for 103.227.91.89, but pattern matches known botnet activity from India.
